

FLEXIBILITY TO REACH AND VISUALIZE REGIONS OF INTEREST

New Rob12C4* ultrasound transducer to support robotics programs in many procedures.

Reach More Anatomy

Reach difficult-to-access anatomy with improved highly flexible cable and small transducer profile.

See More Anatomy

Confidently visualize critical anatomy with excellent image quality, wide field of view, and sensitive color Doppler.

Physician control

Maintain control with a stable grasp using the proprietary fin designed for ProGrasp™ Forceps.

Precision

Measure true size of lesions and anatomy in real-time.
Correlate locations between ultrasound and endoscope images for precise removal or treatment.

Operating Room Convenience

Seamless integration of images with the TilePro™ multi-input display.
Integrate conveniently into crowded OR using 3.5 m cable and small system footprint.
Easy cleaning and sterilization options.

*The Robotic Transducer Rob12C4 has not been licensed by Health Canada; Rob12C4 is compatible with bk5000 software version 5.16.2 and higher.
